2808552 - Long runtime for material master change in the update: Table PPH_DBVM

Version3TypeSAP NoteLanguageEnglishMaster LanguageGerman

PriorityCorrection with high priorityCategoryProgram errorRelease StatusReleased for CustomerReleased On27.06.2019

Component PP-MRP (Material Requirements Planning)

Please find the original document at https://launchpad.support.sap.com/#/notes/2808552

Symptom

If you make changes to the material master data in the fields MATKL ("Material Group") or MSTAE ("Material Status"), the system may read the entire database table when performing a data selection on the table PPH_DBVM. This may lead to runtime and memory problems when the material master data is updated during the further program flow. The problem is that the lock (SM12) for the material master is not released for a very long time.

Other Terms

MM02, PPH_MDCP-BERID, performance, MARA-MATKL, MARA-MSTAE, planning file entry, MRP record, dispsatz_erstellen

Reason and Prerequisites

Program error

Solution

Implement attached advance corrections.

Software Components

Software Component	Release
